

Bring the splendid sound of Baroque music to life in your own home. Recreated as a modern instrument, the most advanced harpsichord yet is here.

During the resplendent days of the Baroque Period, the harpsichord was the keyboard instrument that colored music with its rich, distinctive tone.

Through the generations, it has continued to charm music lovers all over the world. Now, you can easily enjoy its sophisticated sound and elegant form in your own home.

While producing authentically exquisite centuries-old harpsichord sounds and drawing inspiration from 21st century ingenuity, the Roland Classic Series C-30 Digital Harpsichord uses digital technology to enhance playability and expressiveness. Whether you are a virtuoso or a novice, the C-30 makes it possible for you to spend as much quality time as you want with the harpsichord.

C-30 Classic Organ

Accessories

- Decoration panel
- Picture board
- Damper pedal (DP-10)

Roland Classic Series provides you with the opportunity to step back in time and become wrapped in the music of the ages.

The simple and elegant styling suits modern interiors.

Taking up little space, the styling of the C-30 is modeled on the virginal, an ancient rectangular type of harpsichord. With an authentic wooden cabinet and a high quality mahogany finish, the traditional and simple styling will be right at home in a classic or modern interior. The period styling is enhanced by stained glass on the stand, and the decorative panel on the keyboard lid. From a range of optional alternatives, you can create the look you desire by customizing the stained glass and keyboard lid decoration.

Dynamic harpsichord opens a new dimension of musical expression.

While the time-honored sound of the harpsichord is enchanting just as it is, the sound dynamics of traditional instruments cannot be varied by strength of key pressure. Neither do they have a damper pedal to control resonance. Legato and other techniques have not been possible until now. Inside the C-30, digital technology has enabled the harpsichord to be played with different sound dynamics. Answering the calls of a vast number of harpsichord lovers, digital technology has ushered in the possibility of a brand new kind of harpsichord music that just can't be played on acoustic instruments.

No need for tuning. Ready to play anytime, anywhere.
